

## **Letter from the Inventor**

Welcome to the wonderful world of EnviroMagnetics money-saving, pollution reducing technology!

I thought as the inventor, a few words might be in order. Years ago, I was intrigued to learn that magnetism could make hard water soft. I searched and located a few systems in the US and Europe, but they didn't work very well and couldn't provide guaranteed results.

Believing the technology could be improved, I undertook research at the University of California and learned a lot about magnetism and water; I also learned that the only effective systems had to be plumbed in (a major additional cost) and sometimes they did not work – not powerful enough.

### **Breakthrough Discovery**

Impassioned by the concept that a good working technology would save everyone money and reduce water pollution from softening chemicals, I kept studying until I understood exactly what the electromotive energy from the magnetism was really doing to the water. That's when I made and invented the Monopolar Clamp-on discovery:

### **The First Powerful, Easy-to-Install Magnetic Technology**

The Monopolar Clamp-on Flux Driver technology was a power breakthrough design that would get the required energy through steel pipe, the greatest problem in creating an easy-to-install, guaranteed system. Upon testing, the system completely softened residential and commercial hard water without chemicals or energy.

Then the pool and spa technology was created to produce safe, silky-soft crystal-clear water in which the chemicals (chlorine – sanitizers) could no longer attack the skin. It also saved time and money with less maintenance and fewer chemicals.

After that, the garden and crop technology was created to dramatically increase plant yields while reducing water needs.

## Savings Millions Daily

Through the years, my consumer and commercial Monopolar Systems have been installed in over 100 countries saving millions in water costs while increasing yields and profits in agriculture.

### Using Monopolar Technology

## New More Powerful System - Saves More

Now, many years and millions in R&D later, the smaller, more powerful, second generation EnviroMagnetics Technology has been created to 21<sup>st</sup> Century standards using the new magnetic super alloys; providing even easier application and faster results.

## Saving Thousands on Water Softening

We have hard water in our area. When I got my first home, I put the Monopolar softening system on the plumbing. As I wheel-barreled the salt-softener to the trash, I realized all my neighbors have been spending a lifetime hauling expensive salt or chemicals to condition their hard water.

Then about 8 years ago, we moved into a home that needed a dishwasher and a lot of fixtures replaced because of hard water damage. We installed the EnviroMagnetics Hardwater Super Softener and have never had another hard water problem.

Over the years, the Monopolar Technology has saved me and many others tens of thousands in traditional softener costs and plumbing/water appliance replacement costs; all while never putting any salt or chemicals into the ground water or treatment plants - better for all of us.

In 2003, I received a letter from a fellow from Allentown Pennsylvania who had purchased one of the very first Residential Monopolar Softener Systems. He was so pleased to tell his new neighbor that he has not had hard water since 1984; that his Monopolar system has provided soft water since he bought it and was one of the best investments he had ever made. It felt good to get that letter so many years later.

It's wonderful to be able to offer something that works naturally without any energy or chemicals, saves a lot of money, reduces water pollution, and lasts forever. That's a great technology.

**What I really like about the technology:**

**It goes on in minutes and then, you can forget it**

**It works silently, continuously saving you money forever.**

All the systems have been tested by people, businesses, governments and laboratories. It is easy to see how each system literally pays for itself within a few months and provides a lifetime of savings.

Thank you for your interest and welcome to the site. Please let us know if there is anything we may help you with.

All the best,

A handwritten signature in cursive script that reads "Peter Kulish".
