

Letter from the Inventor

Welcome to the wonderful world of EnviroMagnetics money-saving, pollution reducing technology!

I thought as the inventor, a few words of explanation might be in order. Years ago, I was intrigued to learn that magnetism could make hard water soft. This was important because the water could be naturally softened which would eliminate the costly chemicals from our drinking water and the environment. So I searched and located a few systems in the US and Europe, but they didn't work very well and couldn't provide guaranteed results.

Believing the technology could be improved, I undertook research at the University of California and learned that magnetism can also reduce fuel costs and air pollution by increasing combustion efficiency; however again, no effective systems had been produced yet.

Breakthrough Discovery

Impassioned by the concept that a good working technology would save everyone money and reduce pollution, I continued my research and experimentation until one day several years later, I broke through to an understanding of what the magnetism was doing to fuel and water and how to make a really workable technology. After that I proceeded to invent the Monopolar Breakthrough Discovery:

The First Powerful, Easy-to-Install Magnetic Technology

The Monopolar Clamp-on Flux Driver technology was a discovery that created the most powerful field in a design that would get the required energy through steel pipe, the greatest problem in creating an easy to install guaranteed system. Upon testing, the system completely softened hard water without chemicals or energy and reduced fuel costs and air pollution over 25%. Later on, I observed how pool and hot tub water could be made safer and clearer with 50% less chemicals and maintenance and how garden and crop yields increased between 100%-300% and more (see 600% onion size under crop energizers) with reduced water requirements.

Savings Millions Daily

Through the years, consumer and commercial Monopolar Systems have been installed in over 100 countries saving millions in water and fuel water costs while increasing yields and profits in agriculture.

Using Monopolar Technology

New More Powerful System - Saves More

Now, many years later and millions in R&D, I've been able to design the second generation, more powerful EnviroMagnetics Monopolar technology. The increased power provides better savings, greater pollution reduction, and higher increases in plant/crop growth with less water; all of which is easier to apply in most applications.

Saving Thousands on Water Softening

Like many people everywhere, we have hard water. When I got my first home, I put the Monopolar softening system on the plumbing. As I took the salt softener in a wheel barrel to the trash, I realized my neighbors have been spending a lifetime hauling expensive salt or chemicals to condition their hard water.

Then about 8 years ago, we moved into a home that needed a dishwasher and a lot of fixtures replaced because of hard water damage. We installed the EnviroMagnetics Hardwater Super Softener and have never had another hard water problem.

Over the years living in homes with hard water, the Monopolar Technology has saved my family tens of thousands in traditional softener costs and plumbing/water appliance replacement costs; all while not having to put any salt or chemicals into the ground water or treatment plants - which is better for all of us.

In 2003, I received a letter from a fellow from Allentown Pennsylvania who had purchased one of the very first Residential Monopolar Softener Systems I manufactured. He was so pleased to be able to tell his new neighbor that he has not had hard water since 1984; that the system has kept providing soft water since he bought it and was one of the best investments he had ever made. It felt good to get that letter 19 years after the sale.

Frankly, it's wonderful to be able to offer something that works naturally without any energy or chemicals and saves a lot of money, reduces water pollution, and lasts forever. That's a really a great and rather amazing technology and in a category by itself.

Saved \$2200 on Fuel Oil

We have a small country home and the oil company says we are saving an average of over 600 gallons a year to heat our home with the EnviroMagnetics Fuel Oil Super Saver and we keep it warm; that's a lot of savings and believe me, I really appreciate it.

Our clients using the Fuel Oil Super Saver report average savings of 25-30% on new furnaces and higher on older furnaces often showing an ROI sometimes in less than 2 weeks.

Motorcycle Gasoline Fuel Savings

The effect of increasing combustion efficiency works on all hydrocarbon fuels so long as the application is made correctly. For years our systems provided an average of 25% savings for 4 stroke motorcycle engines and up to 50% on 2 stroke engines overseas – all reporting increased power. Motorcyclists enjoy the greater distances between fill-ups.

As car and truck engines became more sophisticate, the advanced engines designs superseded the technology and our systems were not needed here and in the EU. However, they are still used in many countries where they keep the older vehicles running for many years.

What I really like about the technology:

It goes on in minutes and then, you can forget it

It works silently, continuously saving you money forever.

See the product video [blinking] on the home page. It explains how the technology works, why it is the most powerful and the savings it provides.

See the engineering tests on oil and and the fuel video of home owners who are saving substantial money on heating their homes every year.

See what the best Whole-House Magnetic Hard Water Softener provides in natural soft water benefits and yearly savings.

And last but not least, how farmers and growers are increasing their crop by 100-300% while reducing water needs.

All the systems have been tested and used by people, businesses, governments and laboratories worldwide. It is easy to see how each system literally pays for itself within a month or two and then provides a lifetime of savings. EnviroMagnetics technology will save you and your family some serious money every year on your heat and water costs and make your pool or spa safe and crystal clear. It will also increase your garden's yield and make your flowers into a pageant of beauty.

Thank you for your interest and welcome to the site. Please let us know if there is anything we may help you with.

All the best,

A handwritten signature in cursive script that reads "Peter Kulish".
